Objective

I specialize in full-stack web development, creating dynamic and responsive web applications using AngularJS, Node.js, and MySQL. My focus is on delivering efficient, scalable, and user-centric solutions that address real-world challenges.

Through hands-on projects, I have developed strong capabilities in both frontend and backend development, mastering the integration of databases, server-side logic, and interactive user interfaces. Beyond coding, I am passionate about exploring innovative solutions and continuously enhancing my technical expertise.

Skills

- Frontend: TypeScript | JavaScript | Next JS | Angular JS | Tailwind CSS | Search Engine Optimization (SEO)
- Backend: Node JS | Express JS | Rest API | Prisma | npm
- Database: MySQL
- Version Control: Git | GitHub
- Other: v0 | Claude | Cursor | ChatGPT

Education

- **Bachelor of Science in Information Technology**
Benedicto College
A.S Fortuna Street, Mandaue City 6014, Metro Cebu

Projects

- **Benedicto College - Senior High School Grading Management System — AngularJS + Node.js + MySQL**
Developed a multi-role grading system with Superadmin, Registrar, Principal, Teacher, and Student roles. Teachers grade students and lock/unlock subjects per quarter. Principals assign subjects and monitor grade submissions. Registrars and Principals can view student grades and locking history. Students can securely access their final grades once released. The system ensures controlled access, grade transparency, and efficient academic workflow.

- **Multi Step Form — AngularJS**
Built a dynamic multi-step form using AngularJS with form validation, step navigation, and conditional input handling, improving user experience and data collection efficiency.
